Baile Átha Cliath.*

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively are published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

Among the 7 deaths from all causes for Limerick one was stated to be due to typhoid fever.

City of Dublin.—The number of births registered during the week was 292—144 boys and 148 girls. Exclusive of those, numbering 54, occurring in institutions of infants whose mothers were admitted from other localities, the number was 238.

The number of deaths registered was 151—81 males and 70 females. Of the total, 27 related to persons belonging to other localities, so that the actual number of deaths for the City was 124.

Tuberculosis caused 4 deaths (3 of which were from tuberculosis of the respiratory system and one from tuberculous peritonitis), as against 11, 10 and 5 from all forms of tuberculosis in the three preceding weeks.

There was one death from acute poliomyelitis.

Thirteen deaths were caused by malignant neoplasms.

There were 15 deaths from pneumonia, comprising 11 from broncho-pneumonia, one from lobar pneumonia, and 3 from pneumonia (unspecified). Bronchitis caused one death.

There were 2 deaths from gastro-enteritis (under 2 years).

One accidental death was registered. There was also one death by suicide.

Among the deaths of infants under one year, 8 were due to broncho-pneumonia, 2 to gastro-enteritis, one to congenital debility and one to premature birth.

Eighteen of the deaths recorded during the week for the City were those of children under 5 years, 13 being infants under one year, 2 of whom were under one month old and 61 were those of persons aged 65 and upwards, of whom 45 were aged 70 or over.

TABLE 1.—BIRTHS and DEATHS registered during the week ended Saturday, 7th January, 1950 for the Principal Towns with similar particulars for BELFAST and DERRY.

WEEKLY RETURNS OF BIRTHS AND DEATHS FOR THE PRINCIPAL TOWNS

By Authority of the Registrar-General

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 3-4 COLLEGE STREET, DUBLIN

No. 2 Vol. LXXXVII.

WEEK ENDED SATURDAY, 14TH JANUARY, 1950.

PRICE 2d. NET.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively are published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 313—176 boys and 137 girls. Exclusive of those, numbering 63, occurring in institutions of infants whose mothers were admitted from other localities, the number was 250.

The number of deaths registered was 153—79 males and 74 females. Of the total, 17 related to persons belonging to other localities, so that the actual number of deaths for the City was 136.

Tuberculosis caused 14 deaths (all of which were from tuberculosis of the respiratory system,) as against 10, 5 and 4 from all forms of tuberculosis in the three preceding weeks.

Thirteen deaths were caused by malignant neoplasms.

There were 10 deaths from pneumonia, comprising 6 from broncho-pneumonia, one from lobar pneumonia, and 3 from pneumonia (unspecified). Bronchitis caused 8 deaths.

One accidental death was registered.

Among the deaths of infants under one year, 8 were due to pneumonia, one to congenital debility and 3 to premature birth.

Nineteen of the deaths recorded during the week for the city were those of children under 5 years, 17 being infants under one year, 10 of whom were under one month old and 61 were those of persons aged 65 and upwards, of whom 49 were aged 70 or over.

TABLE 1.—BIRTHS and DEATHS registered during the week ended Saturday, 14th January, 1950 for the Principal Towns with similar particulars for BELFAST and DERRY.

WEEKLY RETURNS OF BIRTHS AND DEATHS FOR THE PRINCIPAL TOWNS

By Authority of the Registrar-General

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 3-4 COLLEGE STREET, DUBLIN

No. 3 Vol. LXXXVII.

WEEK ENDED SATURDAY, 21ST JANUARY, 1950.

PRICE 2d. NET.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively are published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 267—126 boys and 141 girls. Exclusive of those, numbering 61, occurring in institutions of infants whose mothers were admitted from other localities, the number was 206.

The number of deaths registered was 148—69 males and 79 females. Of the total, 22 related to persons belonging to other localities, so that the actual number of deaths for the City was 126.

Tuberculosis caused 11 deaths (9 of which were from tuberculosis of the respiratory system and 2 from tuberculous meningitis) as against 5, 4 and 14 from all forms of tuberculosis in the three preceding weeks,

Seventeen deaths were caused by malignant neoplasms.

There were 12 deaths from pneumonia, comprising 7 from broncho-pneumonia, 3 from lobar pneumonia, and 2 from pneumonia (unspecified). Bronchitis caused 6 deaths.

Four accidental deaths were registered.

Among the deaths of infants under one year, 5 were due to pneumonia, one to congenital malformation, one to injury at birth, and one to premature birth.

Fourteen of the deaths recorded during the week for the city were those of children under 5 years, 10 being infants under one year, 7 of whom were under one month old and 67 were those of persons aged 65 and upwards, of whom 54 were aged 70 or over.

TABLE 1.—BIRTHS and DEATHS registered during the week ended Saturday, 21st January, 1950, for the Principal Towns with similar particulars for BELFAST and DERRY.

WEEKLY RETURNS OF BIRTHS AND DEATHS

FOR THE

PRINCIPAL TOWNS

By Authority of the Registrar-General

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 3-4 COLLEGE STREET, DUBLIN

No. 4 VOL. LXXXVII

WEEK ENDED SATURDAY, 28TH JANUARY, 1950.

PRICE 2d. NET.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively are published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 275—145 boys and 130 girls. Exclusive of those, numbering 40, occurring in institutions of infants whose mothers were admitted from other localities, the number was 235.

The number of deaths registered was 159—87 males and 72 females. Of the total, 18 related to persons belonging to other localities, so that the actual number of deaths for the City was 141.

Tuberculosis caused 14 deaths (12 of which were from tuberculosis of the respiratory system and 2 from tuberculous meningitis) as against 4, 14, and 11 from all forms of tuberculosis in the three preceding weeks.

There was one death from diphtheria, one from acute poliomyelitis, one from influenza, and one from gastro-enteritis (under 2 years).

Thirteen deaths were caused by malignant neoplasms.

There were 7 deaths from pneumonia, comprising 4 from broncho-pneumonia and 3 from lobar pneumonia. Bronchitis caused 12 deaths.

Two accidental deaths were registered.

Among the deaths of infants under one year, 3 were due to pneumonia, one to gastro-enteritis, 2 to congenital malformations, one to injury at birth, and 2 to premature birth.

Sixteen of the deaths recorded during the week for the city were those of children under 5 years, 13 being infants under one year, 10 of whom were under one month old and 61 were those of persons aged 65 and upwards, of whom 45 were aged 70 or over.

TABLE II.—Deaths registered during the week ended Saturday, 28th January, 1950, for the City of Dublin and the County Borough of Cork by Registrars' Districts.

WEEKLY RETURNS OF BIRTHS AND DEATHS FOR THE PRINCIPAL TOWNS

By Authority of the Registrar-General

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 3-4 COLLEGE STREET, DUBLIN

No. 5 Vol. LXXXVII.

WEEK ENDED SATURDAY, 4TH FEBRUARY, 1950.

PRICE 2d. NET.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively are published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

The 9 deaths from all causes for Dundalk included one from whooping cough.

CITY OF DUBLIN

The number of births registered during the week was 269—145 boys and 124 girls. Exclusive of those, numbering 61, occurring in institutions of infants whose mothers were admitted from other localities, the number was 208.

The number of deaths registered was 186—87 males and 99 females. Of the total, 30 related to persons belonging to other localities, so that the actual number of deaths for the City was 156.

Tuberculosis caused 10 deaths (9 of which were from tuberculosis of the respiratory system and one from tuberculous meningitis) as against 14, 11 and 14 from all forms of tuberculosis in the three preceding weeks.

There were 2 deaths from acute poliomyelitis.

Twenty-two deaths were caused by malignant neoplasms.

There were 13 deaths from pneumonia, comprising 7 from broncho-pneumonia and 6 from pneumonia (unspecified). Bronchitis caused 14 deaths.

Two accidental deaths were registered.

Among the deaths of infants under one year, 6 were due to pneumonia, one to congenital malformation, and 4 to premature birth.

Twenty-one of the deaths recorded during the week for the city were those of children under 5 years, 16 being infants under one year, 6 of whom were under one month old and 78 were those of persons aged 65 and upwards, of whom 57 were aged 70 and over.

TABLE I.—BIRTHS and DEATHS registered during the week ended Saturday, 4th February, 1950, for the Principal Towns with similar particulars for BELFAST and DERRY.

WEEKLY RETURNS OF BIRTHS AND DEATHS

FOR THE PRINCIPAL TOWNS

By Authority of the Registrar-General

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 3-4 COLLEGE STREET, DUBLIN

No. 6 Vol. LXXXVII.

WEEK ENDED SATURDAY, 11TH FEBRUARY, 1950.

PRICE 2d. NET.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively are published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 244—132 boys and 112 girls. Exclusive of those, numbering 70, occurring in institutions of infants whose mothers were admitted from other localities, the number was 174.

The numbers of deaths registered was 134—79 males and 55 females. Of the total, 16 related to persons belonging to other localities, so that the actual number of deaths for the City was 118.

Tuberculosis caused 10 deaths (8 of which were from tuberculosis of the respiratory system and 2 from tuberculous meningitis) as against 11, 14 and 10 from all forms of tuberculosis in the three preceding weeks.

There was one death from gastro-enteritis (under 2 years).

Eight deaths were caused by malignant neoplasms.

There were 9 deaths from pneumonia, comprising 6 from broncho-pneumonia and 3 from pneumonia (unspecified). Bronchitis caused 4 deaths.

One accidental death was registered.

Among the deaths of infants under one year, one was due to tuberculous meningitis, one to influenza, 4 to pneumonia, one to gastro-enteritis, and 7 to premature birth.

Twenty of the deaths recorded during the week for the city were those of children under 5 years, 16 being infants under one year, 7 of whom were under one month old and 57 were those of persons aged 65 and upwards, of whom 43 were aged 70 or over.

TABLE 1.—BIRTHS and DEATHS registered during the week ended Saturday, 11th February, 1950, for the Principal Towns with similar particulars for BELFAST and DERRY.

WEEKLY RETURNS OF BIRTHS AND DEATHS FOR THE PRINCIPAL TOWNS

By Authority of the Registrar-General

To be purchased through any Bookseller or directly from

THE GOVERNMENT PUBLICATIONS SALE OFFICE, 3-4 COLLEGE STREET, DUBLIN

No. 7 Vol. LXXXVII.

WEEK ENDED SATURDAY, 18TH FEBRUARY, 1950.

PRICE 2d. NET.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively are published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 387—191 boys and 196 girls. Exclusive of those, numbering 60, occurring in institutions of infants whose mothers were admitted from other localities, the number was 327.

The numbers of deaths registered was 155—76 males and 79 females. Of the total, 26 related to persons belonging to other localities, so that the actual number of deaths for the City was 129.

Tuberculosis caused 9 deaths (7 of which were from tuberculosis of the respiratory system, one from tuberculous meningitis, and one from tuberculosis of the genito-urinary system) as against 14, 10 and 10 from all forms of tuberculosis in the three preceding weeks.

There were 2 deaths from gastro-enteritis (under 2 years).

Eight deaths were caused by malignant neoplasms.

There were 5 deaths from pneumonia, comprising 3 from broncho-pneumonia, one from lobar pneumonia and one from pneumonia (unspecified). Bronchitis caused 8 deaths.

Four accidental deaths were registered.

Among the deaths of infants under one year, one was due to tuberculosis of the respiratory system, 2 to pneumonia, 2 to diarrhoea and enteritis, 2 to congenital malformations and one to premature birth.

Fourteen of the deaths recorded during the week for the city were those of children under 5 years, 12 being infants under one year, 3 of whom were under one month old and 78 were those of persons aged 65 and upwards, of whom 62 were aged 70 or over.

TABLE 1.—BIRTHS and DEATHS registered during the week ended Saturday, 18th February, 1950, for the Principal Towns with similar particulars for BELFAST and DERRY.

WEEKLY RETURNS OF BIRTHS AND DEATHS

FOR THE PRINCIPAL TOWNS

By Authority of the Registrar-General

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 3-4 COLLEGE STREET, DUBLIN

No. 8 Vol. LXXXVII.

WEEK ENDED SATURDAY, 25TH FEBRUARY, 1950.

PRICE 2d. NET.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively are published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 360—210 boys and 150 girls. Exclusive of those, numbering 60, occurring in institutions of infants whose mothers were admitted from other localities, the number was 300.

The numbers of deaths registered was 163—85 males and 78 females. Of the total, 32 related to persons belonging to other localities, so that the actual number of deaths for the City was 131.

Tuberculosis caused 7 deaths (all of which were from tuberculosis of the respiratory system) as against 10, 10 and 9 from all forms of tuberculosis in the three preceding weeks.

There was one death from gastro-enteritis (under 2 years).

Seventeen deaths were caused by malignant neoplasms.

There were 7 deaths from pneumonia, comprising one from broncho-pneumonia, one from lobar pneumonia and five from pneumonia (unspecified.) Bronchitis caused 5 deaths.

Two accidental deaths were registered.

Among the deaths of infants under one year, 3 were due to pneumonia, one to gastro-enteritis, one to congenital malformation, 2 to injury at birth, one to congenital debility, and 5 to premature birth.

21 of the deaths recorded during the week for the city were those of children under one year, 14 of whom were under one month old and 59 were those of persons aged 65 and upwards, of whom 47 were aged 70 or over.

TABLE 1.—BIRTHS and DEATHS registered during the week ended Saturday, 25th February, 1950, for the Principal Towns with similar particulars for BELFAST and DERRY.

WEEKLY RETURNS OF BIRTHS AND DEATHS

FOR THE PRINCIPAL TOWNS

By Authority of the Registrar-General

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 3-4 COLLEGE STREET, DUBLIN

No. 9 Vol. LXXXVII.

WEEK ENDED SATURDAY, 4TH MARCH, 1950.

PRICE 2d. NET.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively are published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 338—183 boys and 155 girls. Exclusive of those, numbering 78, occurring in institutions of infants whose mothers were admitted from other localities, the number was 260.

The numbers of deaths registered was 148—69 males and 79 females. Of the total, 34 related to persons belonging to other localities, so that the actual number of deaths for the City was 114.

Tuberculosis caused 9 deaths (8 of which were from tuberculosis of the respiratory system and one from tuberculous meningitis) as against 10, 9 and 7 from all forms of tuberculosis in the three preceding weeks.

Eleven deaths were caused by malignant neoplasms.

There were 2 deaths from pneumonia, comprising one from lobar pneumonia and one from pneumonia (unspecified). Bronchitis caused 5 deaths.

Six accidental deaths were registered.

Among the deaths of infants under one year, one was due to measles, one to pneumonia, one to congenital malformation, one to injury at birth, and 3 to premature birth.

Eight of the deaths recorded during the week for the city were those of children under one year, 5 of whom were under one month old and 69 were those of persons aged 65 and upwards, of whom 44 were aged 70 or over.

WEEKLY RETURNS OF BIRTHS AND DEATHS

FOR THE PRINCIPAL TOWNS

By Authority of the Registrar-General

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 3-4 COLLEGE STREET, DUBLIN

No. 10 Vol. LXXXVII.

WEEK ENDED SATURDAY, 11TH MARCH, 1950.

PRICE 2d. NET.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively are published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 311—165 boys and 146 girls. Exclusive of those, numbering 69, occurring in institutions of infants whose mothers were admitted from other localities, the number was 242.

The number of deaths registered was 139—76 males and 63 females. Of the total, 23 related to persons belonging to other localities, so that the actual number of deaths for the City was 116.

Tuberculosis caused 11 deaths (7 of which were from tuberculosis of the respiratory system 2 from tuberculous meningitis and 2 from other forms of tuberculous disease) as against 9, 7 and 9 from all forms of tuberculosis in the three preceding weeks.

There was one death from measles.

There were 7 deaths from pneumonia, comprising one from lobar pneumonia, 4 from broncho-pneumonia and 2 from pneumonia (unspecified). Bronchitis caused 6 deaths.

Four accidental deaths were registered.

Among the deaths of infants under one year, 4 were due to pneumonia, 2 to congenital malformations, and 3 to premature birth.

Sixteen of the deaths recorded during the week for the city were those of children under five years, 11 being infants under one year, 3 of whom were under one month old, and 61 were those of persons aged 65 and upwards, of whom 43 were aged 70 or over.

WEEKLY RETURNS OF BIRTHS AND DEATHS FOR THE PRINCIPAL TOWNS

By Authority of the Registrar-General

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 3-4 COLLEGE STREET, DUBLIN

No. 11 Vol. LXXXVII

WEEK ENDED SATURDAY, 18TH MARCH, 1950.

PRICE 2d. NET.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively are published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 279—155 boys and 124 girls. Exclusive of those, numbering 58, occurring in institutions of infants whose mothers were admitted from other localities, the number was 221.

The number of deaths registered was 140—62 males and 78 females. Of the total, 11 related to persons belonging to other localities, so that the actual number of deaths for the City was 129.

Tuberculosis caused 12 deaths (9 of which were from tuberculosis of the respiratory system 2 from tuberculosis meningitis and one from disseminated tuberculosis) as against 7, 9 and 11 from all forms of tuberculosis in the three preceding weeks.

There were 9 deaths from pneumonia, comprising 2 from lobar pneumonia, 5 from broncho-pneumonia and 2 from pneumonia (unspecified), Bronchitis caused 6 deaths.

Two accidental deaths were registered.

Among the deaths of infants under one year, one was due to tuberculous meningitis, one to measles, one to influenza, 2 to pneumonia, one to bronchitis, one to gastro-enteritis, one to injury at birth, and 2 to premature birth.

Twenty of the deaths recorded during the week for the city were those of children under five years, 15 being infants under one year, 4 of whom were under one month old, and 62 were those of persons aged 65 and upwards, of whom 52 were aged 70 or over.

TABLE 1.—BIRTHS and DEATHS registered during the week ended Saturday, 18th March, 1950, for the Principal Towns with similar particulars for BELFAST and DERRY.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively are published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 338—198 boys and 140 girls. Exclusive of those, numbering 65, occurring in institutions of infants whose mothers were admitted from other localities, the number was 273.

The number of deaths registered was 205—97 males and 108 females. Of the total, 26 related to persons belonging to other localities, so that the actual number of deaths for the City was 179.

Tuberculosis caused 10 deaths (7 of which were from tuberculosis of the respiratory system 2 from tuberculous meningitis and one from disseminated tuberculosis) as against 9, 11 and 11 from all forms of tuberculosis in the three preceding weeks.

Influenza caused 6 deaths.

There were 11 deaths from pneumonia, comprising 2 from lobar pneumonia, 7 from broncho-pneumonia and 2 from pneumonia (unspecified). Bronchitis caused 7 deaths.

One accidental death was registered.

Among the deaths of infants under one year, one was due to miliary tuberculosis, one to whooping cough, 6 to pneumonia, 2 to gastro-enteritis, one to injury at birth, and 2 to premature birth.

Twenty-two of the deaths recorded during the week for the city were those of children under five years, 17 being infants under one year, 6 of whom were under one month old, and 94 were those of persons aged 65 and upwards, of whom 77 were aged 70 or over.

WEEKLY RETURNS OF BIRTHS AND DEATHS

FOR THE PRINCIPAL TOWNS

By Authority of the Registrar-General

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 3-4 COLLEGE STREET, DUBLIN

No. 13 Vol. LXXXVII.

WEEK ENDED SATURDAY, 1ST APRIL, 1950.

PRICE 2d. NET.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively are published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 379—189 boys and 190 girls. Exclusive of those, numbering 82, occurring in institutions of infants whose mothers were admitted from other localities, the number was 297.

The number of deaths registered was 182—89 males and 93 females. Of the total, 26 related to persons belonging to other localities, so that the actual number of deaths for the City was 156.

Tuberculosis caused 13 deaths (12 of which were from tuberculosis of the respiratory system and one from disseminated tuberculosis) as against 11, 12 and 10 from all forms of tuberculosis in the three preceding weeks.

Influenza caused 5 deaths.

There were 9 deaths from pneumonia, comprising 7 from broncho-pneumonia and 2 from pneumonia (unspecified). Bronchitis caused 7 deaths.

Four accidental deaths were registered.

Among the deaths of infants under one year, one was due to whooping cough, one to measles, 4 to broncho-pneumonia, one to gastro-enteritis, one to congenital malformation, and 4 to premature birth.

Nineteen of the deaths recorded during the week for the city were those of children under five years, 15 being infants under one year, 7 of whom were under one month old, and 85 were those of persons aged 65 and upwards, of whom 66 were aged 70 or over.

TABLE II.—Deaths registered during the week ended Saturday, 1st April, 1950, for the City of Dublin and the County Borough of Cork by Registrars' Districts.

WEEKLY RETURNS OF BIRTHS AND DEATHS FOR THE PRINCIPAL TOWNS

By Authority of the Registrar-General

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 3-4 COLLEGE STREET, DUBLIN

No. 14 Vol. LXXXVII.

WEEK ENDED SATURDAY, 8TH APRIL, 1950.

PRICE 2d. NET.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively are published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 259—132 boys and 127 girls. Exclusive of those, numbering 65, occurring in institutions of infants whose mothers were admitted from other localities, the number was 194.

The number of deaths registered was 117—57 males and 60 females. Of the total, 14 related to persons belonging to other localities, so that the actual number of deaths for the City was 103.

Tuberculosis caused 8 deaths (7 of which were from tuberculosis of the respiratory system and one from tuberculous meningitis) as against 12, 10 and 13 from all forms of tuberculosis in the three preceding weeks.

Influenza caused 4 deaths as against 3, 6 and 5 in the 3 preceding weeks.

There were 5 deaths from pneumonia, comprising 2 from broncho-pneumonia and 3 from pneumonia (unspecified). Bronchitis caused 5 deaths.

Five accidental deaths were registered.

Among the deaths of infants under one year, 2 were due to influenza, one to congenital malformation, and one to premature birth.

Eight of the deaths recorded during the week for the city were those of children under five years, 4 being infants under one year, one of whom was under one month old, and 63 were those of persons aged 65 and upwards, of whom 50 were aged 70 or over.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively are published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 376—182 boys and 194 girls. Exclusive of those, numbering 69, occurring in institutions of infants whose mothers were admitted from other localities, the number was 307.

The number of deaths registered was 159—78 males and 81 females. Of the total, 34 related to persons belonging to other localities, so that the actual number of deaths for the City was 125.

Tuberculosis caused 8 deaths (all of which were from tuberculosis of the respiratory system) as against 10, 13 and 8 from all forms of tuberculosis in the three preceding weeks.

Influenza caused one death as against 6, 5 and 4 in the 3 preceding weeks.

There were 7 deaths from pneumonia, comprising 5 from broncho-pneumonia and 2 from lobar pneumonia. Bronchitis caused 12 deaths.

Among the deaths of infants under one year, one was due to measles, one to lobar pneumonia, 3 to broncho pneumonia, one to gastro-enteritis, one to congenital malformation, and 2 to injury at birth.

Thirteen of the deaths recorded during the week for the city were those of children under five years, 12 being infants under one year, 4 of whom were under one month old, and 55 were those of persons aged 65 and upwards, of whom 38 were aged 70 or over.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively are published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 298—158 boys and 140 girls. Exclusive of those, numbering 55, occurring in institutions of infants whose mothers were admitted from other localities, the number was 243.

The number of deaths registered was 150—66 males and 84 females. Of the total, 28 related to persons belonging to other localities, so that the actual number of deaths for the City was 122.

Tuberculosis caused 3 deaths (2 of which were from tuberculosis of the respiratory system and one from disseminated tuberculosis) as against 13, 8 and 8 from all forms of tuberculosis in the three preceding weeks.

One death from whooping cough and one from measles were recorded.

Influenza caused 2 deaths as against 5, 4 and one in the 3 preceding weeks.

There were 6 deaths from pneumonia, comprising 4 from broncho-pneumonia, one from lobar pneumonia and one from pneumonia unspecified. Bronchitis caused 3 deaths.

Among the deaths of infants under one year, one was due to whooping cough, one to measles, one to broncho pneumonia, one to congenital debility, 2 to injury at birth and 4 to premature birth.

Ten of the deaths recorded during the week for the city were those of children under five years, all being infants under one year, 7 of whom were under one month old, and 71 were those of persons aged 65 and upwards, of whom 52 were aged 70 or over.

TABLE 1.—BIRTHS and DEATHS registered during the week ended Saturday, 22nd April, 1950, for the Principal Towns with similar particulars for BELFAST and DERRY.

WEEKLY RETURNS OF BIRTHS AND DEATHS FOR THE PRINCIPAL TOWNS

By Authority of the Registrar-General

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 3-4 COLLEGE STREET, DUBLIN

No. 17 Vol. LXXXVII.

WEEK ENDED SATURDAY, 29TH APRIL, 1950.

PRICE 2d. NET

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively is published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 337—172 boys and 165 girls. Exclusive of those, numbering 54, occurring in institutions of infants whose mothers were admitted from other localities, the number was 283.

The number of deaths registered was 143—74 males and 69 females. Of the total, 21 related to persons belonging to other localities, so that the actual number of deaths for the City was 122.

Tuberculosis caused 7 deaths (6 of which were from tuberculosis of the respiratory system and one from disseminated tuberculosis) as against 8, 8 and 3 from all forms of tuberculosis in the three preceding weeks.

Influenza caused one death as against 4, one and 2 in the three preceding weeks.

There were two deaths from broncho pneumonia. Bronchitis caused three deaths.

Four accidental deaths were registered. There was also one death by suicide.

Among the deaths of infants under one year, one was due to broncho pneumonia and one to congenital malformation.

Ten of the deaths recorded during the week for the city were those of children under five years, 8 being infants under one year, 5 of whom were under one month old, and 63 were those of persons aged 65 and upwards, of whom 59 were aged 70 or over.

TABLE 1.—BIRTHS and DEATHS registered during the week ended Saturday, 29th April, 1950, for the Principal Towns with similar particulars for BELFAST and DERRY.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively is published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 376—222 boys and 154 girls. Exclusive of those, numbering 57, occurring in institutions of infants whose mothers were admitted from other localities, the number was 319.

The number of deaths registered was 165—81 males and 84 females. Of the total, 24 related to persons belonging to other localities, so that the actual number of deaths for the City was 141.

Tuberculosis caused 12 deaths (10 of which were from tuberculosis of the respiratory system and 2 from tuberculous meningitis) as against 8, 3 and 7 from all forms of tuberculosis in the three preceding weeks.

There were 2 deaths from whooping cough as compared with 0, one and 0 in the three preceding weeks.

Influenza caused 3 deaths as against one, 2 and one in the three preceding weeks.

There were 7 deaths from pneumonia, comprising one from lobar pneumonia, 3 from broncho-pneumonia and 3 from pneumonia (unspecified). Bronchitis caused 3 deaths.

Four accidental deaths were registered. There was also one death by suicide.

Among the deaths of infants under one year, 4 were due to pneumonia, 2 to congenital malformations and 11 to premature birth.

Twenty-five of the deaths recorded during the week for the city were those of children under five years, 21 being infants under one year, 13 of whom were under one month old, and 67 were those of persons aged 65 and upwards, of whom 43 were aged 70 or over.

TABLE 1.—BIRTHS and DEATHS registered during the week ended Saturday, 6th May, 1950, for the Principal Towns with similar particulars for BELFAST and DERRY.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively is published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 291—142 boys and 149 girls. Exclusive of those, numbering 65, occurring in institutions of infants whose mothers were admitted from other localities, the number was 226.

The number of deaths registered was 101—52 males and 49 females. Of the total, 13 related to persons belonging to other localities, so that the actual number of deaths for the City was 88.

Tuberculosis caused 4 deaths (2 of which were from tuberculosis of the respiratory system and 2 from tuberculous meningitis) as against 3, 7 and 12 from all forms of tuberculosis in the three preceding weeks.

There were 11 deaths from pneumonia, comprising 4 from broncho-pneumonia and 7 from pneumonia (unspecified). Bronchitis caused 4 deaths.

One accidental death was registered.

Among the deaths of infants under one year, 6 were due to pneumonia, 2 to congenital malformations, one to bronchitis, one to congenital debility and 2 to premature birth.

Fifteen of the deaths recorded during the week for the city were those of children under five years, 13 being infants under one year, 4 of whom were under one month old, and 46 were those of persons aged 65 and upwards, of whom 33 were aged 70 or over.

TABLE III.—Cases of infectious diseases notified in the undermentioned areas during the week ended Saturday, 13th May, 1950, and during each of the three preceding weeks.

WEEKLY RETURNS OF BIRTHS AND DEATHS FOR THE PRINCIPAL TOWNS

By Authority of the Registrar-General

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 3-4 COLLEGE STREET, DUBLIN

No. 20 Vol. LXXXVII.

WEEK ENDED SATURDAY, 20TH MAY, 1950.

PRICE 2d. NET.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively is published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 357—171 boys and 186 girls. Exclusive of those, numbering 94, occurring in institutions of infants whose mothers were admitted from other localities, the number was 263.

The number of deaths registered was 155—72 males and 83 females. Of the total, 25 related to persons belonging to other localities, so that the actual number of deaths for the City was 130.

Tuberculosis caused 11 deaths (9 of which were from tuberculosis of the respiratory system one from tuberculosis meningitis and one from tuberculous bone disease) as against 7, 12 and 4 from all forms of tuberculosis in the three preceding weeks.

There were 2 deaths from whooping cough and 2 from measles. Deaths from whooping cough in the 3 preceding weeks were 0, 2 and 0, and there were no deaths from measles.

There were 4 deaths from pneumonia, comprising 2 from broncho-pneumonia, one from lobar pneumonia and one from pneumonia (unspecified). Bronchitis caused one death.

Two accidental deaths were registered.

Among the deaths of infants under one year, one was due to tuberculous meningitis, 2 to whooping cough, one to measles, 2 to pneumonia, one to gastro enteritis, 7 to congenital malformations, one to congenital debility, and 4 to premature birth.

Thirty of the deaths recorded during the week for the city were those of children under five years, 29 being infants under one year, 17 of whom were under one month old, and 60 were those of persons aged 65 and upwards, of whom 44 were aged 70 or over.

TABLE 1.—BIRTHS and DEATHS registered during the week ended Saturday, 20th May, 1950, for the Principal Towns with similar particulars for BELFAST and DERRY.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively is published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 381—197 boys and 184 girls. Exclusive of those, numbering 76, occurring in institutions of infants whose mothers were admitted from other localities, the number was 305.

The number of deaths registered was 126—58 males and 68 females. Of the total, 20 related to persons belonging to other localities, so that the actual number of deaths for the City was 106.

Tuberculosis caused 11 deaths (10 of which were from tuberculosis of the respiratory system and one from tuberculous spine disease) as against 12, 4 and 11 from all forms of tuberculosis in the three preceding weeks.

There were 6 deaths from pneumonia, comprising 2 from broncho-pneumonia, 2 from lobar pneumonia and 2 from pneumonia (unspecified). Bronchitis caused six deaths.

One accidental death was registered.

Among the deaths of infants under one year, one was due to pneumonia, one to congenital malformation, 2 to congenital debility and 2 to premature birth.

Ten of the deaths recorded during the week for the city were those of children under five years, 7 being infants under one year, one of whom was under one month old, and 50 were those of persons aged 65 and upwards, of whom 35 were aged 70 or over.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively is published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 371—201 boys and 170 girls. Exclusive of those, numbering 74, occurring in institutions of infants whose mothers were admitted from other localities, the number was 297.

The number of deaths registered was 121—69 males and 52 females. Of the total, 24 related to persons belonging to other localities, so that the actual number of deaths for the City was 97.

Tuberculosis caused 13 deaths (7 of which were from tuberculosis of the respiratory system, 5 from tuberculous meningitis and one from miliary tuberculosis) as against 4, 11 and 11 from all forms of tuberculosis in the three preceding weeks.

There was one death from whooping cough and one from gastro-enteritis (under 2 years). In the 3 preceding weeks deaths from these diseases were respectively, 0, 2 and 0 and 0, one and 0.

There was one death from broncho-pneumonia. Bronchitis caused one death.

One accidental death was registered.

Among the deaths of infants under one year, one was due to tuberculous meningitis, one to broncho-pneumonia, one to gastro-enteritis, one to congenital malformation, one to congenital debility and 4 to premature birth.

Fourteen of the deaths recorded during the week for the city were those of children under five years, 10 being infants under one year, 6 of whom were under one month old, and 47 were those of persons aged 65 and upwards, of whom 32 were aged 70 or over.

TABLE 1.—BIRTHS and DEATHS registered during the week ended Saturday, 3rd June, 1950, for the Principal Towns with similar particulars for BELFAST and DERRY.

WEEKLY RETURNS OF BIRTHS AND DEATHS FOR THE PRINCIPAL TOWNS

By Authority of the Registrar-General

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 3-4 COLLEGE STREET, DUBLIN

No. 23 Vol. LXXXVII.

WEEK ENDED SATURDAY, 10TH JUNE, 1950.

PRICE 2d. NET.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively is published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 269—131 boys and 138 girls. Exclusive of those, numbering 65, occurring in institutions of infants whose mothers were admitted from other localities, the number was 204.

The number of deaths registered was 105—45 males and 60 females. Of the total, 17 related to persons belonging to other localities, so that the actual number of deaths for the City was 88.

Tuberculosis caused 11 deaths (8 of which were from tuberculosis of the respiratory system and 3 from tuberculous meningitis) as against 11, 11 and 13 from all forms of tuberculosis in the three preceding weeks.

There was one death from cerebro-spinal meningitis and one from gastro-enteritis (under 2 years). In the 3 preceding weeks deaths from gastro enteritis were one, 0 and one.

There were 6 deaths from pneumonia, comprising one from lobar pneumonia, 3 from broncho-pneumonia and 2 from pneumonia (unspecified). Bronchitis caused 3 deaths.

Two accidental deaths were registered.

Among the deaths of infants under one year, one was due to broncho-pneumonia, one to pneumonia (unspecified), one to gastro-enteritis, one to congenital malformation, and one to congenital debility.

Ten of the deaths recorded during the week for the city were those of children under five years, 8 being infants under one year, one of whom was under one month old, and 43 were those of persons aged 65 and upwards, of whom 29 were aged 70 or over.

WEEKLY RETURNS OF BIRTHS AND DEATHS FOR THE PRINCIPAL TOWNS

By Authority of the Registrar-General

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 3-4 COLLEGE STREET, DUBLIN

No. 24 Vol. LXXXVII.

WEEK ENDED SATURDAY, 17TH JUNE, 1950.

PRICE 2d. NET.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively is published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 382—209 boys and 173 girls. Exclusive of those, numbering 85, occurring in institutions of infants whose mothers were admitted from other localities, the number was 297.

The number of deaths registered was 103—55 males and 48 females. Of the total, 18 related to persons belonging to other localities, so that the actual number of deaths for the City was 85.

Tuberculosis caused 10 deaths (all of which were from tuberculosis of the respiratory system), as against 11, 13 and 11 from all forms of tuberculosis in the three preceding weeks.

There was one death from influenza and one from pneumonia (unspecified). Bronchitis caused 2 deaths.

Nine accidental deaths were registered.

Among the deaths of infants under one year, one was due to pneumonia (unspecified), one to congenital malformation, one to congenital debility and 4 to premature birth.

Twelve of the deaths recorded during the week for the city were those of children under five years, 11 being infants under one year, 7 of whom were under one month old, and 43 were those of persons aged 65 and upwards, of whom 32 were aged 70 or over.

WEEKLY RETURNS OF BIRTHS AND DEATHS

FOR THE PRINCIPAL TOWNS

By Authority of the Registrar-General

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 3-4 COLLEGE STREET, DUBLIN

No. 25 Vol. LXXXVII.

WEEK ENDED SATURDAY, 24TH JUNE, 1950.

PRICE 2d. NET.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively is published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 371—203 boys and 168 girls. Exclusive of those, numbering 55, occurring in institutions of infants whose mothers were admitted from other localities, the number was 316.

The number of deaths registered was 115—54 males and 61 females. Of the total, 16 related to persons belonging to other localities, so that the actual number of deaths for the City was 99.

Tuberculosis caused 14 deaths (9 of which were from tuberculosis of the respiratory system, 4 from tuberculous meningitis, and one from tuberculous peritonitis), as against 13, 11 and 10 from all forms of tuberculosis in the three preceding weeks.

There was one death from influenza, one from broncho pneumonia and one from pneumonia (unspecified).

Two accidental deaths were registered.

Among the deaths of infants under one year, one was due to broncho pneumonia, one to pneumonia (unspecified), 2 to gastro-enteritis and 3 to premature birth.

Seven of the deaths recorded during the week for the city were those of children under five years, all being infants under one year, 5 of whom were under one month old, and 48 were those of persons aged 65 and upwards, of whom 39 were aged 70 or over.

TABLE 1.—BIRTHS and DEATHS registered during the week ended Saturday, 24th June, 1950, for the Principal Towns with similar particulars for BELFAST and DERRY.

PRINCIPAL TOWNS	POPULATION (a)	BIRTHS	DEATHS	DEATHS CAUSED BY																				
				CAUSED BY																				
				Under 1 year of age	65 years and upwards	Tuber- culosis	Scarlet fever	Diphtheria	Whooping cough	Acute poliomyelitis	Acute infectious encephalitis	Measles	Other infective and parasitic diseases	Malignant neoplasms	Diseases of respiratory system			Gastro-enteritis under 2 years	External causes	Other causes				
		(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)	(13)	(14)	(15)	(16)	(17)	(18)	(19)	(20)	(21)		

(a) According to the Census of Population, 1946. The population given for the City of Dublin, and the Borough of Dun Laoghaire, is that estimated to the middle of 1950. The population for Belfast and Derry is that estimated at the 1st April 1950.

WEEKLY RETURNS OF BIRTHS AND DEATHS FOR THE PRINCIPAL TOWNS

By Authority of the Registrar-General

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 3-4 COLLEGE STREET, DUBLIN

No. 26 Vol. LXXXVII.

WEEK ENDED SATURDAY, 1ST JULY, 1950.

PRICE 2d. NET.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively is published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 345—179 boys and 166 girls. Exclusive of those, numbering 59, occurring in institutions of infants whose mothers were admitted from other localities, the number was 286.

The number of deaths registered was 124—69 males and 55 females. Of the total, 27 related to persons belonging to other localities, so that the actual number of deaths for the City was 97.

Tuberculosis caused 8 deaths, 4 of which were from tuberculosis of the respiratory system, and 4 from tuberculous meningitis, as against 11, 10 and 14 from all forms of tuberculosis in the three preceding weeks.

There were 2 deaths from measles and 2 from gastro enteritis (under 2 years of age).

Twelve deaths were due to malignant neoplasms compared with 10, 9 and 20 in the three preceding weeks.

There were 2 deaths from broncho pneumonia and 2 from pneumonia (unspecified). Bronchitis caused 2 deaths.

Two accidental deaths were registered.

Among the deaths of infants under one year, one was due to measles, one to broncho pneumonia, 2 to gastro-enteritis, one to congenital malformations, one to congenital debility and 8 to premature birth.

Nineteen of the deaths recorded during the week for the city were those of children under five years, 16 being infants under one year, 13 of whom were under one month old, and 47 were those of persons aged 65 and upwards, of whom 33 were aged 70 or over.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively is published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 294—152 boys and 142 girls. Exclusive of those, numbering 67, occurring in institutions of infants whose mothers were admitted from other localities, the number was 227.

The number of deaths registered was 96—46 males and 50 females. Of the total, 16 related to persons belonging to other localities, so that the actual number of deaths for the City was 80.

Tuberculosis caused 11 deaths, 8 of which were from tuberculosis of the respiratory system, one from tuberculous meningitis and 2 from other forms of tuberculous disease, as against 10, 14 and 8 from all forms of tuberculosis in the three preceding weeks.

There were 3 deaths from gastro enteritis (under 2 years of age).

Seven deaths were due to malignant neoplasms compared with 9, 20 and 12 in the three preceding weeks.

There was one death from broncho pneumonia.

Two accidental deaths were registered.

Among the deaths of infants under one year, one was due to meningococcal meningitis, 3 to gastro-enteritis, one to injury at birth and one to congenital debility.

Ten of the deaths recorded during the week for the city were those of children under five years, 7 being infants under one year, one of whom was under one month old, and 37 were those of persons aged 65 and upwards, of whom 29 were aged 70 or over.

WEEKLY RETURNS OF BIRTHS AND DEATHS FOR THE PRINCIPAL TOWNS

By Authority of the Registrar-General

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 3-4 COLLEGE STREET, DUBLIN

No. 28 Vol. LXXXVII

WEEK ENDED SATURDAY, 15TH JULY, 1950.

PRICE 2d. NET.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively is published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 277—168 boys and 109 girls. Exclusive of those, numbering 48, occurring in institutions of infants whose mothers were admitted from other localities, the number was 229.

The number of deaths registered was 115—65 males and 50 females. Of the total, 26 related to persons belonging to other localities, so that the actual number of deaths for the City was 89.

Tuberculosis caused 6 deaths (all of which were from tuberculosis of the respiratory system) as against 14, 8 and 11 from all forms of tuberculosis in the three preceding weeks.

There was one death from gastro enteritis (under 2 years of age).

Fourteen deaths were due to malignant neoplasms compared with 20, 12 and 7 in the three preceding weeks.

There were 5 deaths from pneumonia, comprising 4 from broncho-pneumonia and one from pneumonia unspecified. Bronchitis caused one death.

Two accidental deaths were registered.

Among the deaths of infants under one year, one was due to septic meningitis, one to broncho-pneumonia, one to gastro-enteritis, 4 to congenital malformations, one to injury at birth and 2 to premature birth.

Fifteen of the deaths recorded during the week for the city were those of children under five years, 13 being infants under one year, 7 of whom were under one month old, and 41 were those of persons aged 65 and upwards, of whom 36 were aged 70 or over.

TABLE 1.—BIRTHS and DEATHS registered during the week ended Saturday, 15th July, 1950, for the Principal Towns with similar particulars for BELFAST and DERRY.

WEEKLY RETURNS OF BIRTHS AND DEATHS FOR THE PRINCIPAL TOWNS

By Authority of the Registrar-General

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 3-4 COLLEGE STREET, DUBLIN

No. 29 Vol. LXXXVII.

WEEK ENDED SATURDAY, 22ND JULY, 1950.

PRICE 2d. NET.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively is published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 363—177 boys and 186 girls. Exclusive of those, numbering 65, occurring in institutions of infants whose mothers were admitted from other localities, the number was 298.

The number of deaths registered was 112—55 males and 57 females. Of the total, 33 related to persons belonging to other localities, so that the actual number of deaths for the City was 79.

Tuberculosis caused 5 deaths (3 of which were from tuberculosis of the respiratory system and 2 from other forms of tuberculosis) as against 8, 11 and 6 from all forms of tuberculosis in the three preceding weeks.

Ten deaths were due to malignant neoplasms compared with 12, 7 and 14 in the three preceding weeks.

There were 4 deaths from pneumonia, comprising one from lobar pneumonia, 2 from broncho-pneumonia and one from pneumonia unspecified.

There was one death from gastro-enteritis (under 2 years of age).

One accidental death was registered. There was also one death from suicide.

Among the deaths of infants under one year, one was due to broncho-pneumonia, one to gastro-enteritis, 3 to congenital malformations, one to injury at birth and 2 to premature birth.

Nine of the deaths recorded during the week for the city were those of children under five years, 8 being infants under one year, 5 of whom were under one month old, and 37 were those of persons aged 65 and upwards, of whom 33 were aged 70 or over.

TABLE 1.—BIRTHS and DEATHS registered during the week ended Saturday, 22nd July, 1950, for the Principal Towns with similar particulars for BELFAST and DERRY.

WEEKLY RETURNS OF BIRTHS AND DEATHS FOR THE PRINCIPAL TOWNS

By Authority of the Registrar-General

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 3-4 COLLEGE STREET, DUBLIN

No. 30 Vol. LXXXVII.

WEEK ENDED SATURDAY, 29TH JULY, 1950.

PRICE 2d. NET.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively is published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 348—159 boys and 189 girls. Exclusive of those, numbering 87, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 261.

The number of deaths registered was 90—43 males and 47 females. Of the total, 17 related to persons belonging to other localities, so that the actual number of deaths for the City was 73.

Tuberculosis caused 8 deaths (5 of which were from tuberculosis of the respiratory system, 2 from tuberculous meningitis, and one from tuberculous peritonitis) as against 11, 6 and 5 from all forms of tuberculosis in the three preceding weeks.

Fifteen deaths were due to malignant neoplasms, compared with 7, 14 and 10 in the three preceding weeks.

There was one death from pneumonia (unspecified). Bronchitis caused 2 deaths.

Three accidental deaths were registered.

Among the deaths of infants under one year, one was due to tuberculous meningitis, one to pneumonia (unspecified,) 2 to congenital malformations and one to premature birth.

Nine of the deaths recorded during the week for the city were those of children under one year, 6 of whom were under one month old; and 40 were those of persons aged 65 and upwards, of whom 30 were aged 70 or over.

WEEKLY RETURNS OF BIRTHS AND DEATHS FOR THE PRINCIPAL TOWNS

By Authority of the Registrar-General

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 3-4 COLLEGE STREET, DUBLIN

No. 31 Vol. LXXXVII.

WEEK ENDED SATURDAY, 5TH AUGUST, 1950.

PRICE 2d. NET.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively is published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 297—162 boys and 135 girls. Exclusive of those, numbering 47, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 250.

The number of deaths registered was 112—49 males and 63 females. Of the total, 16 related to persons belonging to other localities, so that the actual number of deaths for the City was 96.

Tuberculosis caused 11 deaths (7 of which were from tuberculosis of the respiratory system, 2 from tuberculous meningitis, and 2 from other forms of tuberculous disease) as against 6, 5 and 8 from all forms of tuberculosis in the three preceding weeks.

Ten deaths were due to malignant neoplasms, compared with 14, 10 and 15 in the three preceding weeks.

There was one death from lobar pneumonia. Bronchitis caused 3 deaths.

Six accidental deaths were registered.

Among the deaths of infants under one year, 2 were due to congenital malformations, one to injury at birth, and 5 to premature birth.

Fifteen of the deaths recorded during the week for the city were those of children under 5 years, 11 being under one year, 8 of whom were under one month old; and 44 were those of persons aged 65 and upwards, of whom 36 were aged 70 or over.

TABLE 1.—BIRTHS and DEATHS registered during the week ended Saturday, 5th August, 1950, for the Principal Towns with similar particulars for BELFAST and DERRY.

WEEKLY RETURNS OF BIRTHS AND DEATHS FOR THE PRINCIPAL TOWNS

By Authority of the Registrar-General

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 3-4 COLLEGE STREET, DUBLIN

No. 32 Vol. LXXXVII

WEEK ENDED SATURDAY, 12TH AUGUST, 1950.

PRICE 2d. NET.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively is published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 265—138 boys and 127 girls. Exclusive of those, numbering 66, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 199.

The number of deaths registered was 109—63 males and 46 females. Of the total, 25 related to persons belonging to other localities, so that the actual number of deaths for the City was 84.

Tuberculosis caused 6 deaths (all of which were from tuberculosis of the respiratory system), as against 5, 8 and 11 from all forms of tuberculosis in the three preceding weeks.

Fifteen deaths were due to malignant neoplasms, compared with 10, 15 and 10 in the three preceding weeks.

There was one death from lobar pneumonia and one from pneumonia (unspecified). Bronchitis caused 4 deaths.

One accidental death was registered and there was one death by suicide.

Among the deaths of infants under one year, one was due to whooping cough, one to measles, one to pneumonia (unspecified), 2 to congenital malformations, 3 to injury at birth, and 5 to premature birth.

Sixteen of the deaths recorded during the week for the city were those of children under one year, 12 of whom were under one month old; and 35 were those of persons aged 65 and upwards, of whom 25 were aged 70 or over.

TABLE 1.—BIRTHS AND DEATHS registered during the week ended Saturday, 12th August, 1950, for the Principal Towns with similar particulars for BELFAST and DERRY.

WEEKLY RETURNS OF BIRTHS AND DEATHS

FOR THE PRINCIPAL TOWNS

By Authority of the Registrar-General

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 3-4 COLLEGE STREET, DUBLIN

No. 33 Vol. LXXXVII.

WEEK ENDED SATURDAY, 19TH AUGUST, 1950.

PRICE 2d. NET.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively is published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 265—138 boys and 127 girls. Exclusive of those, numbering 47, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 218.

The number of deaths registered was 129—57 males and 72 females. Of the total, 24 related to persons belonging to other localities, so that the actual number of deaths for the City was 105.

Tuberculosis caused 9 deaths (6 of which were from tuberculosis of the respiratory system and 3 from tuberculous meningitis), as against 8, 11 and 6 from all forms of tuberculosis in the three preceding weeks.

There was one death from each of whooping cough and acute poliomyelitis, and there were 4 from gastro-enteritis under 2 years of age,

Nineteen deaths were due to malignant neoplasms, compared with 15, 10 and 15 in the three preceding weeks.

There was one death from lobar pneumonia and one from broncho-pneumonia. Bronchitis caused 4 deaths.

Two accidental deaths were registered.

Among the deaths of infants under one year, one was due to tuberculous meningitis, one to whooping cough, one to broncho-pneumonia, 4 to gastro-enteritis, one to congenital malformations and one to premature birth.

Sixteen of the deaths recorded during the week for the city were those of children under 2 years, 15 being under one year, 4 of whom were under one month old; and 50 were those of persons aged 65 and upwards, of whom 40 were aged 70 or over.

WEEKLY RETURNS OF BIRTHS AND DEATHS FOR THE PRINCIPAL TOWNS

By Authority of the Registrar-General

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 3-4 COLLEGE STREET, DUBLIN

No. 34 Vol. LXXXVII.

WEEK ENDED SATURDAY, 26TH AUGUST, 1950.

PRICE 2d. NET.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively is published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 370—188 boys and 182 girls. Exclusive of those, numbering 63, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 307.

The number of deaths registered was 102—58 males and 44 females. Of the total, 14 related to persons belonging to other localities, so that the actual number of deaths for the City was 88.

Tuberculosis caused 3 deaths (all of which were from tuberculosis of the respiratory system), as against 11, 6 and 9 from all forms of tuberculosis in the three preceding weeks.

There was one death from meningococcal meningitis and there were 2 from gastro-enteritis under 2 years of age.

Twelve deaths were due to malignant neoplasms, compared with 10, 15 and 19 in the three preceding weeks.

Influenza caused one death.

There was one death from broncho-pneumonia. Bronchitis caused 2 deaths.

One accidental death was registered.

Among the deaths of infants under one year, 2 were due to gastro-enteritis, 2 to congenital malformations and one to premature birth.

Nine of the deaths recorded during the week for the city were those of children under 5 years, 8 being under one year, 3 of whom were under one month old; and 42 were those of persons aged 65 and upwards, of whom 30 were aged 70 or over.

TABLE 1.—BIRTHS and DEATHS registered during the week ended Saturday, 26th August, 1950, for the Principal Towns with similar particulars for BELFAST and DERRY.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively is published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 288—150 boys and 138 girls. Exclusive of those, numbering 41, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 247.

The number of deaths registered was 103—50 males and 53 females. Of the total, 15 related to persons belonging to other localities, so that the actual number of deaths for the City was 88.

There was one death from whooping cough and there were 2 from gastro-enteritis under 2 years of age.

Tuberculosis caused 5 deaths (2 of which were from tuberculosis of the respiratory system, 2 from tuberculous meningitis and one from tuberculous peritonitis), as against 6, 9 and 3 from all forms of tuberculosis in the three preceding weeks.

Twelve deaths were due to malignant neoplasms, compared with 15, 19 and 12 in the three preceding weeks.

Influenza caused one death.

There was one death from broncho-pneumonia and one from pneumonia (unspecified). Bronchitis caused 3 deaths.

Three accidental deaths were registered.

Among the deaths of infants under one year, one was due to whooping cough, one to broncho-pneumonia, one to pneumonia (unspecified), 2 to gastro-enteritis, 3 to congenital malformations, 2 to injury at birth and 2 to premature birth.

Thirteen of the deaths recorded during the week for the city were those of children under 2 years, 12 being under one year, 5 of whom were under one month old; and 44 were those of persons aged 65 and upwards, of whom 38 were aged 70 or over.

WEEKLY RETURNS OF BIRTHS AND DEATHS

FOR THE PRINCIPAL TOWNS

By Authority of the Registrar-General

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 3-4 COLLEGE STREET, DUBLIN

No. 36 Vol. LXXXVII.

WEEK ENDED SATURDAY, 9TH SEPTEMBER, 1950

PRICE 2d. NET.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively is published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

1950

The number of births registered during the week was 248—126 boys and 122 girls. Exclusive of those, numbering 47, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 201.

The number of deaths registered was 103—56 males and 47 females. Of the total, 22 related to persons belonging to other localities, so that the actual number of deaths for the City was 81.

There was one death from whooping cough and one from gastro-enteritis under 2 years of age.

Tuberculosis caused 5 deaths (3 of which were from tuberculosis of the respiratory system, one from tuberculous meningitis and one from tuberculosis of the bones and joints), as against 9, 3 and 5 from all forms of tuberculosis in the three preceding weeks.

Eighteen deaths were due to malignant neoplasms, compared with 19, 12 and 12 in the three preceding weeks.

There was one death from broncho-pneumonia. Bronchitis caused one death.

Three accidental deaths were registered.

Among the deaths of infants under one year, one was due to whooping cough, one to gastro-enteritis, 2 to congenital malformations and 2 to premature birth.

Ten of the deaths recorded during the week for the city were those of children under one year, 3 of whom were under one month old; and 37 were those of persons aged 65 and upwards, of whom 28 were aged 70 or over.

TABLE 1.—BIRTHS and DEATHS registered during the week ended Saturday, 9th September, 1950, for the Principal Towns with similar particulars for BELFAST and DERRY.

WEEKLY RETURNS OF BIRTHS AND DEATHS FOR THE PRINCIPAL TOWNS

By Authority of the Registrar-General

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 3-4 COLLEGE STREET, DUBLIN

No. 37 Vol. LXXXVII. WEEK ENDED SATURDAY, 16TH SEPTEMBER, 1950. PRICE 2d. NET.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively is published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 360—172 boys and 188 girls. Exclusive of those, numbering 62, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 298.

The number of deaths registered was 118—56 males and 62 females. Of the total, 31 related to persons belonging to other localities, so that the actual number of deaths for the City was 87.

There was one death from whooping cough.

Tuberculosis caused 9 deaths (7 of which were from tuberculosis of the respiratory system, one from tuberculosis of the bones and joints and one from tuberculosis disseminated as against 3, 5 and 5 from all forms of tuberculosis in the three preceding weeks.

Seventeen deaths were due to malignant neoplasms, compared with 12, 12 and 18 in the three preceding weeks.

There was one death from broncho-pneumonia and one from pneumonia unspecified.

One accidental death was registered.

Among the deaths of infants under one year, one was due to whooping cough, 4 to congenital malformations and one to congenital debility.

Ten of the deaths recorded during the week for the city were those of children under five years, 8 being under one year, 5 of whom were under one month old; and 36 were those of persons aged 65 and upwards, of whom 26 were aged 70 or over.

TABLE I.—BIRTHS and DEATHS registered during the week ended Saturday, 16th September, 1950, for the Principal Towns with similar particulars for BELFAST and DERRY.

WEEKLY RETURNS OF BIRTHS AND DEATHS FOR THE PRINCIPAL TOWNS

By Authority of the Registrar-General

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 3-4 COLLEGE STREET, DUBLIN

No. 38 Vol. LXXXVII.

WEEK ENDED SATURDAY, 23RD SEPTEMBER, 1950.

PRICE 2d. NET.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the Principal Towns are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively is published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 269—143 boys and 126 girls. Exclusive of those, numbering 57, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 212.

The number of deaths registered was 127—66 males and 61 females. Of the total, 15 related to persons belonging to other localities, so that the actual number of deaths for the City was 112.

There was one death from gastro-enteritis.

Tuberculosis caused 16 deaths (14 of which were from tuberculosis of the respiratory system and 2 from tuberculous meningitis) as against 5, 5 and 9 from all forms of tuberculosis in the three preceding weeks.

Seventeen deaths were due to malignant neoplasms, compared with 12, 18 and 17 in the three preceding weeks.

There were two deaths from broncho-pneumonia and one from pneumonia (unspecified). Bronchitis caused 3 deaths.

Two accidental deaths were registered.

Among the deaths of infants under one year, one was due to pneumonia (unspecified), one to gastro-enteritis (under 2 years), one to congenital malformations, 2 to injury at birth, one to congenital debility, and one to premature birth.

Nine of the deaths recorded during the week for the city were those of children under five years, 8 being under one year, 6 of whom were under one month old; and 57 were those of persons aged 65 and upwards, of whom 44 were aged 70 or over.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively is published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 360—189 boys and 171 girls. Exclusive of those, numbering 64, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 296.

The number of deaths registered was 122—61 males and 61 females. Of the total, 16 related to persons belonging to other localities, so that the actual number of deaths for the City was 106.

Tuberculosis caused 5 deaths (4 of which were from tuberculosis of the respiratory system and one from tuberculous meningitis) as against 5.9 and 16 from all forms of tuberculosis in the three preceding weeks.

Sixteen deaths were due to malignant neoplasms, compared with 18, 17 and 17 in the three preceding weeks.

There were two deaths from broncho-pneumonia and one from pneumonia (unspecified). Bronchitis caused 2 deaths.

Three accidental deaths were registered.

Among the deaths of infants under one year, one was due to pneumonia, 2 to congenital malformations, one to injury at birth, and 4 to premature birth.

Twelve of the deaths recorded during the week for the city were those of children under five years, 10 being under one year, 7 of whom were under one month old; and 50 were those of persons aged 65 and upwards, of whom 37 were aged 70 or over.

TABLE 1.—BIRTHS and DEATHS registered during the week ended Saturday, 30th September, 1950, for the Principal Towns with similar particulars for BELFAST and DERRY.

WEEKLY RETURNS OF BIRTHS AND DEATHS FOR THE PRINCIPAL TOWNS

By Authority of the Registrar-General

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 3-4 COLLEGE STREET, DUBLIN

No. 40 Vol. LXXXVII.

WEEK ENDED SATURDAY, 7TH OCTOBER, 1950.

PRICE 2d. NET.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively is published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 267—144 boys and 123 girls. Exclusive of those, numbering 59, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 208.

The number of deaths registered was 120—72 males and 48 females. Of the total, 28 related to persons belonging to other localities, so that the actual number of deaths for the City was 92.

Tuberculosis caused 7 deaths (6 of which were from tuberculosis of the respiratory system and one from disseminated tuberculosis) as against 9, 16 and 5 from all forms of tuberculosis in the three preceding weeks.

There were 2 deaths from gastro-enteritis (under 2 years).

Eleven deaths were due to malignant neoplasms, compared with 17, 17 and 16 in the three preceding weeks.

There was one death from lobar pneumonia and one from pneumonia (unspecified). Bronchitis caused one death.

Two accidental deaths were registered.

Among the deaths of infants under one year, 2 were due to gastro-enteritis, 2 to congenital malformations, and 2 to premature birth.

Ten of the deaths recorded during the week for the city were those of children under five years, 7 being under one year, 2 of whom were under one month old; and 40 were those of persons aged 65 and upwards, of whom 30 were aged 70 or over.

WEEKLY RETURNS OF BIRTHS AND DEATHS FOR THE PRINCIPAL TOWNS

By Authority of the Registrar-General

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 3-4 COLLEGE STREET, DUBLIN

No. 41 Vol. LXXXVII

WEEK ENDED SATURDAY, 14TH OCTOBER, 1950.

PRICE 2d. NET.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively is published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 309—160 boys and 149 girls. Exclusive of those, numbering 65, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 244.

The number of deaths registered was 142—71 males and 71 females. Of the total, 30 related to persons belonging to other localities, so that the actual number of deaths for the City was 112.

Tuberculosis caused 13 deaths (10 of which were from tuberculosis of the respiratory system and 3 from tuberculous meningitis) as against 16, 5 and 7 from all forms of tuberculosis in the three preceding weeks.

There was one death from gastro-enteritis (under 2 years).

Seventeen deaths were due to malignant neoplasms, compared with 17, 16 and 11 in the three preceding weeks.

There was one death from lobar pneumonia and 2 from pneumonia (unspecified). Bronchitis caused one death.

Two accidental deaths were registered.

Among the deaths of infants under one year, one was due to gastro-enteritis, one to measles, one to tuberculous meningitis, one to pneumonia, one to premature birth and 3 to injury at birth.

Ten of the deaths recorded during the week for the city were those of children under five years, 9 being under one year, 7 of whom were under one month old; and 56 were those of persons aged 65 and upwards.

WEEKLY RETURNS OF BIRTHS AND DEATHS

FOR THE PRINCIPAL TOWNS

By Authority of the Registrar-General

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 3-4 COLLEGE STREET, DUBLIN

No. 42 Vol. LXXXVII.

WEEK ENDED SATURDAY, 21ST OCTOBER, 1950.

PRICE 2d. NET.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively is published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 343—170 boys and 173 girls. Exclusive of those, numbering 66, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 277.

The number of deaths registered was 116—63 males and 53 females. Of the total, 25 related to persons belonging to other localities, so that the actual number of deaths for the City was 91.

Tuberculosis caused 7 deaths (all of which were from tuberculosis of the respiratory system) as against 5, 7 and 13 from all forms of tuberculosis in the three preceding weeks.

Thirteen deaths were due to malignant neoplasms, compared with 16, 11 and 17 in the three preceding weeks.

There was one death from lobar pneumonia and 2 from pneumonia (unspecified). Bronchitis caused 3 deaths.

One accidental death was registered.

Among the deaths of infants under one year, 2 were due to pneumonia, 5 to congenital malformations, and 4 to premature birth.

Thirteen of the deaths recorded during the week for the city were those of children under one year, 9 of whom were under one month old; and 44 were those of persons aged 65 and upwards.

TABLE 1.—BIRTHS and DEATHS registered during the week ended Saturday, 21st October, 1950, for the Principal Towns with similar particulars for BELFAST and DERRY.

WEEKLY RETURNS OF BIRTHS AND DEATHS FOR THE PRINCIPAL TOWNS

By Authority of the Registrar-General

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 3-4 COLLEGE STREET, DUBLIN

No. 43 Vol. LXXXVII

WEEK ENDED SATURDAY, 28TH OCTOBER, 1950.

PRICE 2d. NET.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the Principal Towns are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively is published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 289—161 boys and 128 girls. Exclusive of those, numbering 73, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 216.

The number of deaths registered was 131—69 males and 62 females. Of the total, 16 related to persons belonging to other localities, so that the actual number of deaths for the City was 115.

Tuberculosis caused 10 deaths (8 of which were from tuberculosis of the respiratory system and 2 from disseminated tuberculosis) as against 7, 13 and 7 from all forms of tuberculosis in the three preceding weeks.

Fifteen deaths were due to malignant neoplasms, compared with 11, 17 and 13 in the three preceding weeks.

There was one death from gastro-enteritis (under 2 years).

There was one death from lobar pneumonia, one from broncho-pneumonia and one from pneumonia (unspecified). Bronchitis caused 3 deaths.

Two accidental deaths were registered.

Among the deaths of infants under one year, one was due to gastro-enteritis, one to congenital malformation and 2 to premature birth.

Seven of the deaths recorded during the week for the city were those of children under one year, 4 of whom were under one month old; and 64 were those of persons aged 65 and upwards.

TABLE II.—Deaths registered during the week ended Saturday, 1950, for the City of Dublin and the County Borough of Cork by Registrars' Districts.

DEATHS																										
AGES AT DEATH										CAUSED BY																
										Tuberculosis		Scarlet fever	Diphtheria	Whooping cough	Acute infectious encephalitis	Measles	Other infective and parasitic diseases	Malignant neoplasms	Diseases of respiratory system			Gastro-enteritis under 2 years	External causes	Other causes

WEEKLY RETURNS OF BIRTHS AND DEATHS

FOR THE PRINCIPAL TOWNS

By Authority of the Registrar-General

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 3-4 COLLEGE STREET, DUBLIN

No. 44 Vol. LXXXVII.

WEEK ENDED SATURDAY, 4TH NOVEMBER, 1950.

PRICE 2d. NET.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively is published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 302—140 boys and 162 girls. Exclusive of those, numbering 55, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 247.

The number of deaths registered was 100—58 males and 42 females. Of the total, 19 related to persons belonging to other localities, so that the actual number of deaths for the City was 81.

Tuberculosis caused 4 deaths (one of which was from tuberculosis of the respiratory system, one from tuberculous meningitis and 2 from disseminated tuberculosis) as against 15, 7 and 10 from all forms of tuberculosis in the three preceding weeks.

Ten deaths were due to malignant neoplasms, compared with 17, 13 and 15 in the three preceding weeks.

There were 2 deaths from broncho-pneumonia. Bronchitis caused 2 deaths.

Four accidental deaths were registered.

Among the deaths of infants under one year, 2 were due to broncho-pneumonia, one to congenital malformation, 2 to injury at birth, and 5 to premature birth.

Eleven of the deaths recorded during the week for the city were those of children under one year, 8 of whom were under one month old; and 37 were those of persons aged 65 and upwards.

TABLE I.—BIRTHS and DEATHS registered during the week ended Saturday, 4th November, 1950, for the Principal Towns with similar particulars for BELFAST and DERRY.

WEEKLY RETURNS OF BIRTHS AND DEATHS FOR THE PRINCIPAL TOWNS

By Authority of the Registrar-General

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 3-4 COLLEGE STREET, DUBLIN

No. 45 Vol. LXXXVII.

WEEK ENDED SATURDAY, 11TH NOVEMBER, 1950.

PRICE 2d. NET.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively is published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 295—173 boys and 122 girls. Exclusive of those, numbering 56, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 239.

The number of deaths registered was 140—73 males and 67 females. Of the total, 37 related to persons belonging to other localities, so that the actual number of deaths for the City was 103.

Tuberculosis caused 4 deaths (all of which were from tuberculosis of the respiratory system) as against 7, 10 and 4 from all forms of tuberculosis in the three preceding weeks.

Eighteen deaths were due to malignant neoplasms, compared with 13, 15 and 10 in the three preceding weeks.

There were two deaths from broncho-pneumonia and 2 from pneumonia (unspecified).

Four accidental deaths were registered.

Among the deaths of infants under one year, one was due to diarrhoea and enteritis, one to pneumonia, 2 to congenital malformations and 3 to premature birth.

Nine of the deaths recorded during the week for the city were those of children under one year, 4 of whom were under one month old; and 53 were those of persons aged 65 and upwards.

TABLE 1.—BIRTHS and DEATHS registered during the week ended Saturday, 11th November, 1950, for the Principal Towns with similar particulars for BELFAST and DERRY.

WEEKLY RETURNS OF BIRTHS AND DEATHS FOR THE PRINCIPAL TOWNS

By Authority of the Registrar-General

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 3-4 COLLEGE STREET, DUBLIN

No. 46 Vol. LXXXVII.

WEEK ENDED SATURDAY, 18TH NOVEMBER, 1950.

PRICE 2d. NET.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively is published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 332—167 boys and 165 girls. Exclusive of those, numbering 82, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 250.

The number of deaths registered was 121—70 males and 51 females. Of the total, 15 related to persons belonging to other localities, so that the actual number of deaths for the City was 106.

Tuberculosis caused 4 deaths (one of which was from tuberculosis of the respiratory system, one from tuberculous meningitis and 2 from disseminated tuberculosis) as against 10, 4 and 4 from all forms of tuberculosis in the three preceding weeks.

Sixteen deaths were due to malignant neoplasms, compared with 15, 10 and 18 in the three preceding weeks.

There were 5 deaths from pneumonia, comprising 2 from lobar pneumonia and 3 from broncho-pneumonia. Bronchitis caused 6 deaths.

Eight accidental deaths were registered.

Among the deaths of infants under one year, 2 were due to diarrhoea and enteritis and 2 to pneumonia.

Seven of the deaths recorded during the week for the city were those of children under one year, 2 of whom were under one month old; and 58 were those of persons aged 65 and upwards.

TABLE I.—BIRTHS and DEATHS registered during the week ended Saturday, 18th November, 1950, for the Principal Towns with similar particulars for BELFAST and DERRY.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively is published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 245—133 boys and 112 girls. Exclusive of those, numbering 71, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 174.

The number of deaths registered was 131—71 males and 60 females. Of the total, 17 related to persons belonging to other localities, so that the actual number of deaths for the City was 114.

There was one death from scarlet fever.

Tuberculosis caused 9 deaths (6 of which were from tuberculosis of the respiratory system, 2 from tuberculous meningitis and one from tuberculous spine) as against 4, 4 and 4 from all forms of tuberculosis in the three preceding weeks.

Eleven deaths were due to malignant neoplasms, compared with 10, 18 and 16 in the three preceding weeks.

There were 4 deaths from pneumonia, comprising one from lobar pneumonia, one from broncho-pneumonia and 2 from pneumonia (unspecified). Bronchitis caused 2 deaths.

Two accidental deaths were registered.

Among the deaths of infants under one year, 2 were due to pneumonia, one to congenital malformation, one to injury at birth, one to congenital debility and 2 to premature birth.

Eleven of the deaths recorded during the week for the city were those of children under one year, 7 of whom were under one month old; and 56 were those of persons aged 65 and upwards.

TABLE I.—BIRTHS and DEATHS registered during the week ended Saturday, 25th November, 1950, for the Principal Towns with similar particulars for BELFAST and DERRY.

WEEKLY RETURNS OF BIRTHS AND DEATHS

FOR THE PRINCIPAL TOWNS

By Authority of the Registrar-General

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 3-4 COLLEGE STREET, DUBLIN

No. 48 Vol. LXXXVII.

WEEK ENDED SATURDAY, 2ND DECEMBER, 1950.

PRICE 2d. NET.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively is published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 282—141 boys and 141 girls. Exclusive of those, numbering 58, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 224.

The number of deaths registered was 154—76 males and 78 females. Of the total, 35 related to persons belonging to other localities, so that the actual number of deaths for the City was 119.

There was one death from scarlet fever.

Tuberculosis caused 10 deaths (8 of which were from tuberculosis of the respiratory system, one from tuberculous spine and one from disseminated tuberculosis) as against 4, 4 and 9 from all forms of tuberculosis in the three preceding weeks.

Fourteen deaths were due to malignant neoplasms, compared with 18, 16 and 11 in the three preceding weeks.

There were 2 deaths from pneumonia, comprising one from lobar pneumonia and one from broncho-pneumonia. Bronchitis caused 6 deaths.

Six accidental deaths were registered.

Among the deaths of infants under one year, 2 were due to pneumonia, one to injury at birth, one to congenital debility and 4 to premature birth.

Twelve of the deaths recorded during the week for the city were those of children under one year, 8 of whom were under one month old; and 59 were those of persons aged 65 and upwards.

TABLE 1.—BIRTHS and DEATHS registered during the week ended Saturday, 2nd December, 1950, for the Principal Towns with similar particulars for BELFAST and DERRY.

WEEKLY RETURNS OF BIRTHS AND DEATHS

FOR THE PRINCIPAL TOWNS

By Authority of the Registrar-General

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 3-4 COLLEGE STREET, DUBLIN

No. 49 Vol. LXXXVII.

WEEK ENDED SATURDAY, 9TH DECEMBER, 1950.

PRICE 2d. NET.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively is published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 279—146 boys and 133 girls. Exclusive of those, numbering 56, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 223.

The number of deaths registered was 172—90 males and 82 females. Of the total, 16 related to persons belonging to other localities, so that the actual number of deaths for the City was 156.

There were 2 deaths from measles.

Tuberculosis caused 14 deaths (11 of which were from tuberculosis of the respiratory system, one from tuberculous disease of glands and 2 from disseminated tuberculosis) as against 4, 9 and 10 from all forms of tuberculosis in the three preceding weeks.

Eighteen deaths were due to malignant neoplasms, compared with 16, 11 and 14 in the three preceding weeks.

There was one death from influenza.

There were 5 deaths from pneumonia, comprising one from lobar pneumonia and 4 from broncho-pneumonia. Bronchitis caused 9 deaths.

Four accidental deaths were registered.

Among the deaths of infants under one year, one was due to measles, 2 to pneumonia, one to congenital malformations, one to congenital debility and 2 to premature birth.

Eight of the deaths recorded during the week for the city were those of children under one year, 3 of whom were under one month old; and 95 were those of persons aged 65 and upwards.

WEEKLY RETURNS OF BIRTHS AND DEATHS FOR THE PRINCIPAL TOWNS

By Authority of the Registrar-General

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 3-4 COLLEGE STREET, DUBLIN

No. 50 Vol. LXXXVII.

WEEK ENDED SATURDAY, 16TH DECEMBER, 1950.

PRICE 2d. NET.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively is published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 216—112 boys and 104 girls. Exclusive of those, numbering 42, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 174.

The number of deaths registered was 168—80 males and 88 females. Of the total, 25 related to persons belonging to other localities, so that the actual number of deaths for the City was 143.

There were 2 deaths from measles.

Tuberculosis caused 8 deaths (all of which were from tuberculosis of the respiratory system,) as against 9, 10 and 14 from all forms of tuberculosis in the three preceding weeks.

Fifteen deaths were due to malignant neoplasms, compared with 11, 14 and 18 in the three preceding weeks.

There were 4 deaths from pneumonia, comprising 3 from broncho-pneumonia and one from pneumonia (unspecified). Bronchitis caused 8 deaths.

Three accidental deaths were registered.

Among the deaths of infants under one year, one was due to measles, one to pneumonia, one to congenital malformations, 2 to congenital debility and 5 to premature birth.

Seventeen of the deaths recorded during the week for the city were those of children under one year, 12 of whom were under one month old; and 70 were those of persons aged 65 and upwards.

TABLE I.—BIRTHS and DEATHS registered during the week ended Saturday, 18th December, 1950, for the Principal Towns with similar particulars for BELFAST and DERRY.

WEEKLY RETURNS OF BIRTHS AND DEATHS FOR THE PRINCIPAL TOWNS

By Authority of the Registrar-General

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 3-4 COLLEGE STREET, DUBLIN

No. 51 Vol. LXXXVII

WEEK ENDED SATURDAY, 23RD DECEMBER, 1959.

PRICE 2d. NET.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the Principal Towns are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively is published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 326—167 boys and 159 girls. Exclusive of those numbering 60, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 266.

The number of deaths registered was 141—70 males and 71 females. Of the total, 21 related to persons belonging to other localities, so that the actual number of deaths for the City was 120.

There were 2 deaths from measles.

Tuberculosis caused 8 deaths (all of which were from tuberculosis of the respiratory system,) as against 10, 14 and 8 from all forms of tuberculosis in the three preceding weeks.

Fourteen deaths were due to malignant neoplasms, compared with 14, 18 and 15 in the three preceding weeks.

There were 7 deaths from pneumonia, comprising 5 from broncho-pneumonia and 2 from pneumonia (unspecified). Bronchitis caused 3 deaths.

Two accidental deaths were registered.

Among the deaths of infants under one year, 2 were due to pneumonia, one to congenital malformations and one to congenital debility.

Five of the deaths recorded during the week for the city were those of children under one year; and 64 were those of persons aged 65 and upwards.

TABLE 1.—BIRTHS and DEATHS registered during the week ended Saturday, 23rd December, 1950, for the Principal Towns with similar particulars for BELFAST and DERRY.

WEEKLY RETURNS OF BIRTHS AND DEATHS FOR THE PRINCIPAL TOWNS

By Authority of the Registrar-General

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 3-4 COLLEGE STREET, DUBLIN

No. 52 Vol. LXXXVII.

WEEK ENDED SATURDAY, 30TH DECEMBER, 1950.

PRICE 2d. NET.

PRINCIPAL TOWNS

Particulars of the births and deaths recorded for the **Principal Towns** are given in Table I. Deaths have been assigned, so far as possible, to the area of residence and those of non-residents have been excluded. In Table II information regarding the deaths recorded in the registrars' districts comprising the City of Dublin and Cork county borough respectively is published. Table III shows the number of cases of infectious diseases notified in the city of Dublin, the borough of Dun Laoghaire, and the county boroughs of Cork, Limerick and Waterford with comparative figures for each of the three preceding weeks.

CITY OF DUBLIN

The number of births registered during the week was 241—117 boys and 124 girls. Exclusive of those, numbering 50, occurring in institutions, of infants whose mothers were admitted from other localities, the number was 191.

The number of deaths registered was 165—80 males and 85 females. Of the total, 25 related to persons belonging to other localities, so that the actual number of deaths for the City was 140.

There was one death from whooping cough.

Tuberculosis caused 12 deaths (11 of which were from tuberculosis of the respiratory system and one from tuberculous meningitis), as against 14, 8 and 8 from all forms of tuberculosis in the three preceding weeks.

Nine deaths were due to malignant neoplasms, compared with 18, 15 and 14 in the three preceding weeks.

There were 7 deaths from pneumonia, comprising one from lobar pneumonia, 4 from broncho-pneumonia and 2 from pneumonia (unspecified). Bronchitis caused 3 deaths.

Six accidental deaths were registered.

Among the deaths of infants under one year, 2 were due to pneumonia, one to whooping cough, 3 to congenital malformations, 2 to congenital debility, one to tuberculous meningitis and 4 to premature birth.

Sixteen of the deaths recorded during the week for the city were those of children under one year; and 87 were those of persons aged 65 and upwards.

TABLE I.—BIRTHS and DEATHS registered during the week ended Saturday, 30th December, 1950, for the Principal Towns with similar particulars for BELFAST and DERRY.
